AI TownSquare Program

TownSquare’1

A Global Conversation, Sparked Locally

About the AI TownSquare

The AI TownSquare is a forward looking and inclusive platform designed to bridge the gap between AI advancement and societal readiness, globally.

Approach

Session 1 combines an interactive workshop with a Q&A segment, designed to ensure participants leave with a deep understanding of one key topic—AI is a general-purpose technology useful for many things

Key Characteristics:

- **Duration:** 3 hours
- **Location**: Workinton, Alfardan Centre
- **Primary Delivery Format:** Small group and pair discussions. Powerful for facilitating exposure to new perspectives.
- **Category & Focus:** AI fundamentals; Basic principles and concepts.
- **Outcome**: Comprehensive Understanding of the general purpose nature of AI.

Target Audience

Business leaders, decision-makers, and executives curious and interested in exploring the transformative potential and broad applications of AI.

TownSquare’1 Objectives

One

Demystify AI

Provide a clear, non-technical understanding of what AI is and isn't, making the concept accessible to a general audience.

Two

Contextualize AI as a General-Purpose Technology (GPT)

Explain the concept of GPTs and position AI within this framework, using historical examples for comparison.

Three

Illustrate AI's Versatility

Demonstrate the wide-ranging applications of AI across different industries and in everyday life, highlighting its transformative potential.

Four

Foster Awareness of AI's Impact

Help participants recognize how AI is already influencing various aspects of society and business, and how it might continue to do so in the future.

Five

Prepare Participants for Further Engagement

Lay a foundation of knowledge that will enable attendees to engage more meaningfully with AI-related topics and discussions in the future.

TownSquare’1 Topics

Main Topic: AI is a general-purpose technology useful for many things.

Learning Outcome #1

Understanding AI's wide-ranging applications

- What AI and isn't?
- Definition and characteristics of General Purpose Technologies(GPTs)
- Historical examples of GPTS
- Comparisons with past GPTs

Learning Outcome #2

How AI is used across different fields (The transformation potential of AI)

- Examples in everyday life
- Applications in various industries

Preferred Teaching Formats

Lectures: Provide foundational knowledge on AI.
Small Group Discussions: Activities to demonstrate the potential of AI in participants' respective fields.
Q&A: Address questions about AI concepts and applications.
